

Corel Paradox Developer Services

Work with Mike Prestwood and our talented developers to complete tasks and projects.

Full Life-Cycle * Maintenance * Updates
Coding * Project Management * QA * Testing * Tech Writing

1. New Corel Paradox Applications

Looking for an ObjectPAL programmer? Paradox is a powerful application development tool and may be the right tool for your next project. However, you need to be sure to use the right tool for the right job. There are things you should consider BEFORE choosing ANY application development tool. Call us today for a FREE consultation with Mike Prestwood to discuss your project and tool selection. Mike Prestwood is our President & CEO, and author of six Paradox books.

2. Corel Paradox Maintenance Coding

From a single 4 hour task to ongoing development.

Our position on programming in legacy systems written in Paradox is that if you don't have the budget for a conversion to a leading technology, then leave the application in the tool it is in now. The problem is finding programmers that can program in that tool. Luckily, Prestwood can fulfill your legacy programming needs. We can add that needed feature or remove that annoying bug. We can even upgrade you to version 9, 10, 11, etc. To get started, open a support account or contact us now.

3. Corel Paradox Conversion Projects

If you're looking for a programmer to convert your existing Corel Paradox application to a leading technology, Prestwood can help both with coding and process.

We can convert your existing Paradox for Windows or Paradox for DOS application to another technology such as Borland Delphi or Visual Studio.Net (C# or VB.Net). In addition, we can convert your application into a web application or extend your Paradox desktop application with a website. For websites we use either ASP Classic, ASP.Net, or PHP.

As a demonstration of our skills in converting your application we invite you to view our Corel Paradox Conversion Guides. *These guides were developed by us (primarily by Mike Prestwood with input from our developers). We are experts in the languages we support.*

Visit www.prestwood.com to review our 12+ Corel Paradox conversion guides.

4. Personal Developer Support

Your Corel Paradox co-developer!

Are you an Corel Paradox developer? Do you sometimes want expert advice? Sometimes it's nice to have a co-developer to assign tasks to, take over development of certain areas, ask questions of and bounce ideas off of. Open a [Support Account](#) now and we'll assign a developer to work with you and you can also consult with Mike Prestwood on an as needed basis.
